

Plan Optimiser

80% of Aussies could be on the wrong energy plan.

Take the guesswork out of your energy bills.

What is Plan Optimiser?

Plan Optimiser uses your actual household energy and solar data to compare energy plans available on the market and identify the best option for your home.

No estimates. No assumptions.

Just clear, accurate comparisons based on how your home really uses energy.

We take the guesswork out of choosing the right energy plan.

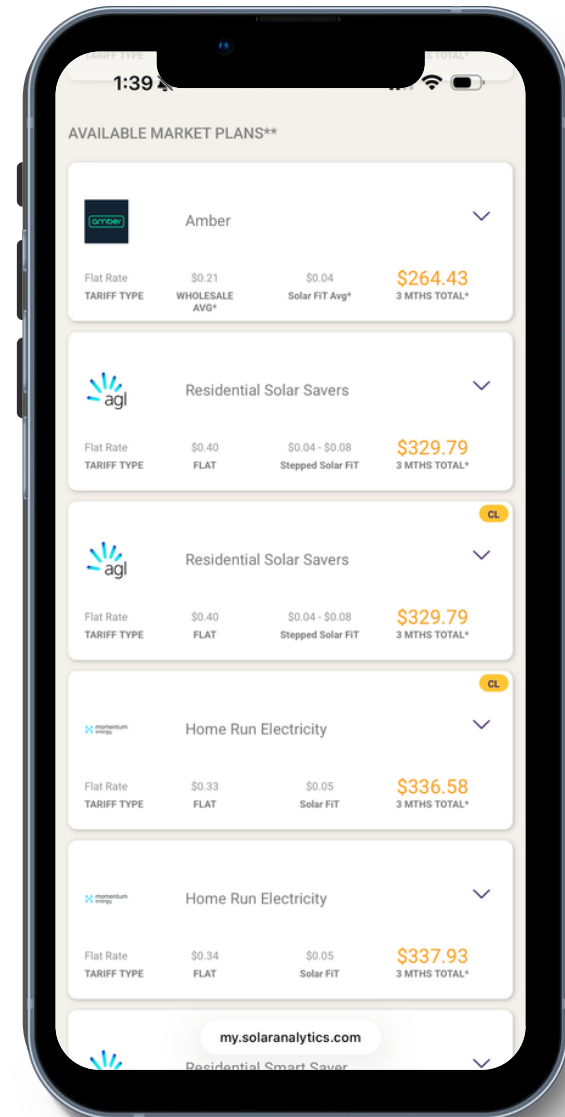

How Plan Optimiser Works

Plan Optimiser uses your actual household energy usage to compare energy plans and find the best fit for you!

We look at:

- Time of use vs flat rate tariffs
- Wholesale vs Traditional Plans and even EV plans
- Import, Export and Daily Supply Charges
- Your real solar production and usage

So you can see exactly what you'll pay, and what you could save.

How to Sign Up

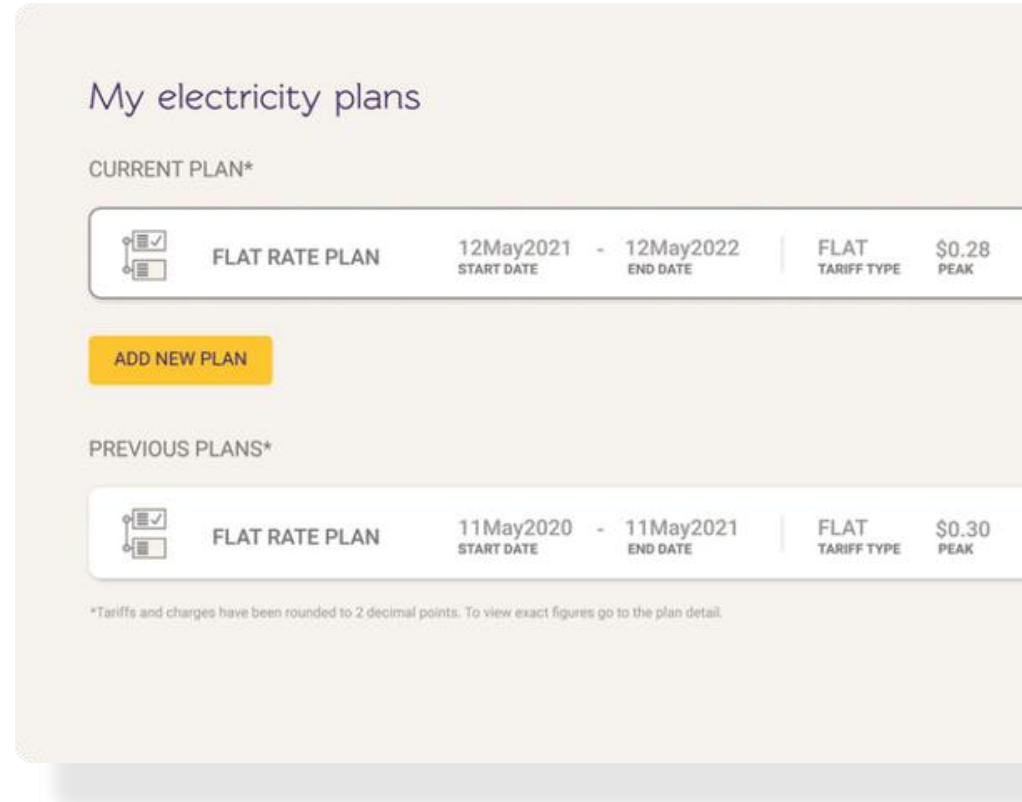

Add the details from your latest electricity bill to set up your current plan.

From day one, you can select a usage profile (e.g. mostly daytime or evening usage) to get an immediate plan recommendation.

After around three months of data collection, Plan Optimiser analyses your home's actual energy usage and calculates your true electricity costs.

Advanced algorithms assess your usage patterns across tariffs, imports, and exports to determine the most cost-effective options.

The best plans are clearly presented, showing your potential savings and making it easy to compare and switch.

The screenshot displays a user interface for managing electricity plans. It features a title 'My electricity plans' and two main sections: 'CURRENT PLAN*' and 'PREVIOUS PLANS*'. Each section contains a table with columns for plan name, start date, end date, tariff type, and peak rate. A yellow 'ADD NEW PLAN' button is located between the two sections. A disclaimer at the bottom states: '*Tariffs and charges have been rounded to 2 decimal points. To view exact figures go to the plan detail.'

CURRENT PLAN*					
	FLAT RATE PLAN	12May2021 START DATE	- 12May2022 END DATE	FLAT TARIFF TYPE	\$0.28 PEAK

[ADD NEW PLAN](#)

PREVIOUS PLANS*					
	FLAT RATE PLAN	11May2020 START DATE	- 11May2021 END DATE	FLAT TARIFF TYPE	\$0.30 PEAK

*Tariffs and charges have been rounded to 2 decimal points. To view exact figures go to the plan detail.

Frequently Asked Questions

Is there a subscription cost?

No, all CATCH Control users gain free access to Plan Optimiser.

Do I need to switch providers through CATCH?

No, Plan Optimiser simply shows you the best options. You're free to choose and switch with any provider.

Do you guarantee the savings estimate?

Savings are an estimate, not a guarantee. They're based on your data and are a strong indicator, but actual results may vary depending on usage, weather, and other factors.

When can I start seeing results?

You can get a recommendation from day one using a usage profile. With more data over time, recommendations become even more accurate.

Does Plan Optimiser work with batteries?

Yes, when used with an integrated inverter and battery system, Plan Optimiser helps maximise your overall savings.

Does it keep updating?

Yes, Plan Optimiser regularly updates with new plans and recalculates your savings, so you're always on the best option.
