

CERTIFICATE OF COMPLIANCE

Virtual Power Plant (VPP)

Capability Statement

Certificate No: VPP-CATCH-2025-001

This certificate confirms that CATCH Control meets the requirements for Virtual Power Plant (VPP) participation as defined under the Australian Government's Battery Incentive Program.

VPP Compliance Declaration CATCH Power Pty Ltd hereby certifies that CATCH Control, when used in conjunction with compatible battery and inverter installations, satisfies the following regulatory requirements under the Battery Incentive Program:

- The battery and inverter are capable of connecting (directly or indirectly) to external entities in a manner that enables the battery and inverter to respond to remote signals
- The system facilitates participation in Virtual Power Plant operations through secure cloud-based connectivity and API integration
- Remote control capabilities are enabled through the CATCH Control platform without requiring additional hardware or software from the end user
- The system provides real-time monitoring and control of connected battery systems for VPP coordination and grid services

Technical Capabilities

- Compatible with leading battery and inverter manufacturers across multiple brands

Secure API integration enabling VPP operator connectivity and control

- Real-time data transmission and bidirectional communication capabilities
- Full compliance with relevant Australian standards and Distribution Network Service Provider (DNSP) requirements

Installer Statement

Equipment Required: No additional equipment, software applications, or technology beyond the standard CATCH Control installation is required to enable participation in a Virtual Power Plant.

Regulatory Compliance: This certificate serves as the written statement required under Section 12(h)(iv) of the Battery Incentive Program regulations, confirming VPP capability of installations utilising CATCH Control.
